Abstract (en)
In a label dispensing device 1, a stationary tray holding portion 21, the position of which is fixed, holds a medicine tray 8 with sections 11a to 11d. First and second printer portions 22A, 22B, the positions of which are fixed, are disposed above the tray holding portion 21. A movable stocker 23 is disposed between the tray holding portion and the printer portions. The stocker 23 is disposed in any one of "a reference position," "a right shift position" or "a left shift position." A supply operation of supplying labels L from the first and second printer portions 22A, 22B to first and second label receiving chambers 32A, 32B of the stocker 23, and a discharge operation of opening the first and second label receiving chambers 32A, 32B to drop the labels L to the sections 11a to 11d of the medicine tray 8, are repeated. Highly efficient dispensing of the labels L can be achieved.
