Abstract (en)

[origin: EP2394940A2] The apparatus has a suction box attached to a suction tape conveyor (15) i.e. horizontal conveyor, which is movable by a mechanical drive (17) e.g. linear drive or cam plate drive. A pressing mechanism (20) is movable transverse to a suction belt of the suction tape conveyor for transferring workpieces in to a stacking cartridge (19) or stacking stations. The suction tape conveyor and the suction box are connected in series. The stacking cartridge is arranged in a driving direction of the suction tape conveyor, where the workpiece is produced from a sheet of a packaging material.
