Abstract (en)

[origin: EP2395183A1] The spanner (1) has a spanner bow (2), where a spanner shaft (3) is projected from the spanner bow and comprises recesses (4). A coupling element (15) is arranged at the shaft in a movable manner and provided with two contact areas (17, 18) in a usage position in which the spanner is extended into a profile cylinder (9). The contact areas are accessed from an outer side of the shaft. The coupling element is arranged in an access authorization position that is defined by predetermined positions of the contact areas at a rotating surface of a closing core (13) in the profile cylinder. An independent claim is also included for a combination of a profile cylinder spanner and a profile cylinder.
