Abstract (en)
[origin: WO2010092534A1] Compositions for the treatment of aphthous stomatitis are described comprising a) a zinc salt of a polyhydroxy acid and b) a magnesium salt of a polyhydroxy acid, wherein the components a) and b) are in a v/v ratio of 10:1 to 1 :10. In particular, said compositions have proved to be remarkably effective not only for the surprising swiftness to which the aphthous stomatitis heals, but also for the significant reduction in their subsequent recurrence in time.
