Abstract (en)

[origin: WO2010091732A1] According to a method for producing composite hollow articles, especially tubular composite hollow articles, an interlaced, woven, or bonded fabric is applied to an elongate supporting core (1) that is essentially made of an elastomer material or an at least partially ductile or flexible material. The applied interlaced, woven, or bonded fabric is then strengthened using a binder, and the supporting core is removed once the binder has cured.
