Abstract (en)

[origin: WO2010043226A1] The expression "Cardboard-wine" is an over all definition of wine stored in bags of foil or plastic, comprising a discharge valve, which in turn is packaged in a box shaped carton in which the discharge valve can be fixed during pouring the wine. The disadvantage of "Cardboard-wine" is inter alia, that it is not decorative on a dinner table, and especially, that the discharge valve is arranged closest to the bottom of the lower end of the carton, which causes a need for the carton to be raised in order to affix a glass below the discharge valve. This has lead to development of various stands and hides, which aesthetic appearance leaves a lot. Further it is not possible visually to determine how much wine is left in the bag inside the carton. Thus there is disclosed a dispenser for fluids/wine stored as all ready said, which is characterized in that it comprises an enclosure (8) for receiving a bag (4) containing a fluid, where the side (12) of the enclosure (8) comprises a first take out for receiving the discharge valve (6), and inside the enclosure (8) a displaceable mounted, and against the lid, pressure- and/or draw imposed plate (18), setting the fluid/wine under pressure, which allows the wine to be poured without to raise the carton above the table surface, whereby the carton will not dominate the table setting visually. The pressure imposed plate (18) further comprises studs protruding through tracks in the enclosure, whereby visual control of the content of fluid in the package can be determined.
