Abstract (en)

[origin: WO2010092129A2] The invention relates to a reciprocating engine (10) and a method for regulating a reciprocating engine (10), in which a combustion chamber temperature θ -BRT in one or more cylinders (1) is made available, wherein the combustion chamber temperature θ -BRT in the respective cylinder (1) is measured, and the ignition point is individually regulated in one or more cylinders (1) in such a way that an upward or downward deviation of the combustion chamber temperature θ -BRT from a predefined desired value S is minimal.
