Abstract (en)
[origin: WO2010091673A1] The invention relates to an anchor having a tie rod comprising a head on the front end thereof having a greater diameter than the tie rod at least in a radial direction, and having a longitudinally supported expanding sleeve longitudinally axially displaceably disposed on the tie rod in the direction of the head, so that forcing the expanding sleeve onto the head expands the expanding sleeve in the radial direction. According to the invention, the expanding sleeve contacts the tie rod with a friction fit without threads, said tie rod being preferably cranked. An extension of the expanding sleeve extends backwards over the area of the crank.
