Abstract (en)
[origin: WO2010092110A1] The invention relates to a lighting device (1) comprising a heat sink (4), which has at least one carrier (6) attached to the outside (5) of the heat sink for at least one semiconductor light source (7), in particular a light-emitting diode, and a cavity (14) for accommodating a driver (20) and at least one electrically insulating supply (8), which connects the cavity (14) to the outside (5) of the heat sink (4), wherein the supply (8) comprises a contact surface (24) that connects to the outside (5) of the heat sink (4) in a flush manner, wherein the contact surface is at least partially covered by the carrier (6).
