Abstract (en)
[origin: EP2397266A2] The device (10) has an energy transmission element moved between an initial position and a setting position along setting axles for transmission of energy to a fastening element. A receiving element receives a deceleration element, and is made of metal and/or alloy. The energy transmission element, a driving mechanism, the deceleration element and the receiving element are accommodated in a housing (20). The housing is made of plastic. The receiving element is fastened to the driving mechanism by the housing.
