Abstract (en)
[origin: EP2397381A2] The system (1) has a drive device (2) for operating a door casement (3), and a control device (10) for controlling the drive device, where the control device comprises a volatile storage memory device for recording operating data of the system. A receiver i.e. global positioning sensor (GPS) receiver, receives a signal from an external location and time signal transmitter. A timing signal transmitter transmits the received signal from the receiver to a computer device over a wireless transmission link, where the computer device processes the received signal.
