Abstract (en)

[origin: EP2397601A1] The traverse (24) has two holding elements (33, 34) connected with left and right side elements of a household appliance, respectively. A traverse body (36) has a transverse extension (38) that is larger than a height extension (40) of the body. The body connects the side elements with one another along the transverse width to produce a stabilized effect between the side elements. The body is made from plastic, and has a base plate extending in a plane clamped by the transverse and height extensions. Rods (46) are arranged on the plate, and comprise a crossover point on the plane. An independent claim is also included for a component for mounting a household-appliance.
