Abstract (en)

Bandraster system for constructing a suspended ceiling, comprising - a U-shaped longitudinal bandraster member (2) comprising a base (6), side walls (7,8) and flanges (11,12) delimiting a connection volume, - and a connection member (1) with a protrusion (15), wherein the protrusion, the connection member and the bandraster member are provided such that the bandraster member (2) can be connected by the connection member (1) by hooking the bandraster member (2) on the connection part (3) of the connection member (1) by putting the protrusion (15) between the first side wall (7) and the first flange (11) after which the connection part (3) is snap-fittingly received in the connection volume by rotating the second part (5) and the bandraster member (2) with respect to each other around the protrusion (15) into the connection volume such that it is received between the base (6) and the second flange.
