Abstract (en)
[origin: EP2397632A1] An assist mechanism includes a striker which is provided in a door, and a receiving member provided in a door frame and moving after capturing the striker at a predetermined forward-moving position of the door, to assist a forward movement of the door to a closing position. The striker is supported in a striker base including an attachment portion relative to the door so as to be capable of adjusting a supporting position in a direction approximately along a rotational direction of the door by an adjusting device.
