Abstract (en)  
The device has an inner wall (10) running around a hollow body (1), where a combustible material is accommodatable between the hollow body and the inner wall. The hollow body and inner wall are provided with openings (2), and an outer wall (20) runs around the inner wall. An inner base (3) applies ignition agent, and is air-permeable and arranged within the hollow body, where an upper part of the hollow body is movable relative to remaining parts of the hollow body. The inner wall and outer wall are connected with each other by an air-permeable base (30) i.e. disk.

Abstract (de)  
Die Vorrichtung zum Verbrennen von Brennmaterial in schüttfähiger Form umfasst mindestens einen Hohlkörper (1), eine um diesen verlaufende Begrenzungswand (10) und eine Abschirmwand (20), welche um die Begrenzungswand (10) verläuft. Zwischen Hohlkörper und Begrenzungswand ist das Brennmaterial aufnehmbar. Der Hohlkörper und die Begrenzungswand sind mit Öffnungen (2, 12) versehen.
