Abstract (en)
[origin: EP2397800A1] To provide a refrigerator which allows defrosting an entire cooler without raising temperature of a defrosting heater too high, a refrigerator (100) includes a heat-insulating main body (150) having an opening in a front face and a cooler (310) which cools air inside the heat-insulating main body (150), and includes a radiant heater (312) which is provided below the cooler (310) and removes frost formed on the cooler 310 by radiant heat, and a contact heater (313) which is provided in an upper part of the cooler (310) and removes frost formed on the cooler (310) by thermal conduction.
