Abstract (en)
An apparatus for providing an identification of a media piece played by a broadcast station comprises an input interface (10) for receiving broadcasted information from a plurality of different broadcast stations, and for receiving a message from a user, the message comprising an identification of a specific broadcast station and time data related to a broadcast time of a requested media piece. Additionally, a piece identification extractor (12) is provided for generating a separate record for each broadcast station, the record for each station comprising media piece identifications and associated broadcast times. Additionally, an information retriever (14) is provided for retrieving the identification of the requested media piece using the identification of the broadcast station and the broadcast time data. A sender (16) then sends an answer to the user, the answer comprising information on the requested media piece.
