Abstract (en)

[origin: WO2010095032A1] The invention relates to a system for processing objects, in particular aluminum extrusions, rods or bolts, comprising a pre-heating system for warming the objects, a furnace subordinate to the pre-heating device for heating the objects and a processing unit subordinate to the furnace and at least one unit for transport to the pre-heating system, to the pre-heating device and to the furnace, wherein the system A comprises a pre-heating device (1) in the design of a magazine, having the characteristic of storing a plurality of objects (S) and removing and adding at least one object (S), wherein the preheating device (1) is operated and heated by the exhaust of the furnace (2). The invention also relates to a pre-heating device.
