Abstract (en)
[origin: WO2010094549A1] The invention relates to a pivotable boat drive, comprising a transmission unit (1). The transmission unit (1) comprises, at a connection point (A), an input shaft (11) of a drive device (10), that can be driven by a drive motor and is arranged in such a way that it can be rotated about a first rotational axis (5), and an output shaft (3) that is coupled to the input shaft (11) and arranged in such a way that it can be rotated about a second rotational axis (8). The rotational axes (5, 6) are neither parallel nor concentric to each other. The transmission unit (1) has at least one other connection point (B,C) on which another drive device (20) that can be driven by another drive motor is provided for driving the output shaft (3).
