Abstract (en)

[origin: WO2010136179A2] The invention relates to a textile material comprising at least one textile base layer (11) and nap threads (13) or nap loops protruding therefrom. The textile base layer (11) substantially comprises electrically impingeable threads (11e) that can be implemented as self-illuminating threads or heating conductors. The textile base layer (11) comprises no or fewer nap threads (13) or nap loops in an area in which said electrically impingeable threads (11e) are disposed, in order to obtain increased efficiency of the electrically impingeable threads, that is, more efficient light emission or increased heat intensity.
