Abstract (en)  
[origin: WO2010082227A2] Roller shutter comprising a plurality of slats 30, 30a in order to provide a curtain sliding in a couple of sliding guides, characterized in that said slats 30, 30a comprises a fixed frame 40, 40a and at least a movable swinging wing 1. In other words, such roller shutter does not contains any- driving mechanisms for rotating the swinging wings, such rotation being only provided by the gravity force. The winding up of the curtain around the roller in the rising and lowering steps can be either manual and motorized. Such roller shutter allows the double function of aerating the rooms and protecting them from light, water and dust infiltrations. It can be realized in any material, even differently combined without altering the functions of the invention.
