Abstract (en)

[origin: EP2399839A1] The bag (10) has a thermally sealable film with a pocket (12) for receiving bag contents to a tobacco portion (11). A locking tab (15) i.e. winding tab, covers a pocket aperture (18) with the closed bag and rests against a triangular pocket wall e.g. front wall (13) and a rear wall. The pocket is formed in triangular shape with the front and the rear walls that are connected with each other by an edge-side pocket seam (17). The tab rests in a closing position with a triangular partial tab (22) at the front wall and another triangular partial tab (23) against the rear wall of the pocket. An independent claim is also included for a method for manufacturing a tobacco bag.
