Abstract (en)
[origin: EP2400103A2] The structure has a plate-like body (1) i.e. door leaf, at which two guide rails (4) are fixed, where the guide rails are arranged at distance to each other. Attachment shells (6) cover the body, and are made of aluminum or plastic. Two retaining bars (8) are arranged at the shells. The guide rails and the retaining bars are lockable together by displacement in longitudinal direction relative to each other. The guide rails and/or retaining bars are made of sheet metal i.e. sheet steel, and a laterally protruding projection (5) is formed at the guide rails and/or retaining bars.
