Abstract (en)
[origin: EP2065651A2] The appliance has a control unit (14) and a user interface (16) e.g. touch-screen, selecting a degree e.g. heating degree, from a number of degrees to adjust a successive adjustable operating parameter. The control unit is designed to use an allocation function (20) for determining the operating parameter depending on the selected degree. The user interface includes an adjusting unit (18) for changing the allocation function. The user interface has two buttons for incrementing and decrementing the degree. A memory unit (26) e.g. ROM, stores a list of values used as a parameter of the function.
