Abstract (en)

[origin: EP2400672A1] An improved method for reducing an amount of precoding feedback information in a multi-carrier Multiple-Input Multiple-Output (MIMO) communication system using precoding is disclosed. At the receiving end, the method jointly selects a limited number of P codebook indices and a limited number of K' sub-bands to be included in a subset \tilde{E} ($m_1, \dots, m_{K'}$) of a set \mathcal{O} of allowed sub-bands. K' is here set to a value $K' < K$ and P is set to a value $P \# K'$. The P codebook indices and information identifying the subset \tilde{E} is then conveyed to the transmitting end.
