Abstract (en)
[origin: WO2010097454A1] The invention relates to methods for producing an electrical fuse (1), in particular a fusible link, with electrically conducting materials (2), which are enclosed by electrically insulating materials (3), and with electrically conducting terminal elements (4) on the electrically conducting materials (2). According to the invention, it is proposed that an endless blank (5) is produced by an extrusion process from the electrically conducting materials (2) and electrically insulating materials (3) and, after the extrusion process, the blank (5) is cut to the desired length and provided with the terminal elements (4) before or after the curing, cooling or drying.
