Abstract (en)

[origin: WO2010097529A2] The invention relates to a vehicle comprising a thermo-aerodynamic module (1) consisting at least of elements for cooling the engine, including a radiator (2) and a motor-driven fan (3). Said thermo-aerodynamic module (1) is arranged above the drive train (8) of the vehicle, in the space between the so-called "technical hood" false surface (9) and the surface of the drive train increased by its range of movement (11), in such a way as to reduce the distance between the drive train (8) and the bumper at the front of the vehicle, and, as a result, to reduce the front technical overhang of the vehicle.
