Abstract (en)

[origin: WO2010097458A1] The invention relates to a method for adhering an object (12) having an adhesive tape (16) preferably having a liner (26), wherein the object having the adhesive tape contacts and is applied to the object during transport of the object having the likewise transported adhesive tape and wherein the speed of the object and the speed of the adhesive tape are synchronized during the adhesion. In order to enable adhesion of the object without influencing the adhesive tape, whereby the adhesive effect could be negatively influenced, according to the invention the object is transported by means of a handling arrangement and both the velocity and acceleration curves of the object are transferred to the transport of the adhesive tape via an axis of the handling device.
