Abstract (en)  
[origin: WO2010097328A1] The invention relates to a round sling (1) for raising loads, having an inner clutch (15) and a sheath (2) accommodating the inner clutch (15), that is designed as a hollow braid and the end sections (3, 4) thereof being connected to one another in a connection zone (5), inserted into one another and overlapping each other. The advantages of a hollow braid sheath in said round sling in a simple and cost-effective production method can be utilized in that, according to the invention, at least one guiding lateral opening (8a, 8b) is formed in the end section (4) on the outside of the connection zone (5), on the circumferential surface of the end section (4), and that a retaining element (11) is held on the end section (3) on the inside of the connection zone (5) and is led through the opening (7a, 7b) of the end section (4) on the outside.
