Abstract (en)

[origin: WO2010097287A1] In order to develop a retaining ring for a vacuum switching tube, the retaining ring comprising retaining means for retaining a vapor shield for protecting inner surfaces of a tube housing of the vacuum switching tube, wherein an easier-to-design and lower-cost construction of a vacuum switching tube is enabled by the retaining ring, it is proposed that the retaining means be formed by tabs extending axially from the inner circumference of the retaining ring in opposite directions.
