Abstract (en)  
The ship has an integrated retainer for retaining boats as suspendable tender boats by formation of a retaining area that is formed by a floodable ship-structural bay (2). Volume-variable cushion elements (4) adjust and fix the taken up boat and are engaged at the boat walls. The cushion elements are controllable in a side wall region of the bay and formed as beads within a lateral region of the bay, where a base region of the bay is designed as a slip path with rollers. The cushion elements are controlled by control units for introduction, braking, prefixing, lifting and protecting processes.

Abstract (de)  
Zur Aufnahme eines aussetzbaren Tenderbootes in einem Schiff ist vorgesehen, dass ein Aufnahmebereich durch eine flutbare schiffbauliche Bucht gebildet ist. In dieser Bucht sind steuerbare volumenveränderliche Kissen Elemente zur lagebestimmten Fixierung des aufgenommenen Bootes vorgesehen.
