Abstract (en)

[origin: EP2402385A1] A method for producing a polyamide resin characterized by comprising thermally polycondensation of tetramethylene diamine and either an aliphatic dicarboxylic acid having 7 or more carbon atoms or a salt thereof, and then being melt-polymerized at a temperature equal to or higher than the melting point thereof until the relative viscosity of a 0.01 g/ml solution thereof in 98% sulfuric acid solution with a 0.01 g/ml content at 25 °C becomes 2.2-5.0.
