Abstract (en)

A wall lower guide device for a sliding door (2), comprising a body (8) having an inner first surface or face (9) movable frontally to said wall (4), opposing lateral faces (11) connecting said first surface (9) to an outer second surface or face (10) of the door (2), along said wall (4) a guide element (3) being positioned, cooperating with a guided member (15) associated with the door (2) to guide the movement of this latter along said wall (4), in this latter there being provided an aperture (5) to be closed by said door (2). The device comprises a connection member (21) hinged at its ends (23, 24) respectively to said guide (3) and to said door (2), said member (21) guiding the door (2) along the guide element (3) and parallel to itself towards the wall (4) when the door (2) is in a position corresponding with said aperture (5) such as to close it.
