Abstract (en)
[origin: EP2402542A2] The system (1) has a sealing device (11) comprising a magnet, which moves a sealing strip (12) based on position of a door wing (2) and is arranged at the sealing strip. The magnet cooperates with another magnet that is arranged at the door wing. The latter magnet is rotatably supported at the door wing. The sealing strip is pressurized based on rotation position of the latter magnet in a non-sealing position and/or a sealing position. A distance element is arranged between the two magnets. The sealing device comprises an actuating element.
