Abstract (en)
[origin: EP2402545A2] The system (1) has a sealing device (11) for sealing a door wing (2) relative to an adjacent component of the system. The sealing device includes magnets, which move a sealing strip (12) based on a position of the door wing. The sealing device includes a base profile, which is movably mounted relative to the door wing. The magnets are arranged at or in the base profile. The sealing strip is movably mounted relative to the base profile by a control lever element. The lever element is connected with the base profile and the sealing strip by pivot joints.
