Abstract (en)
[origin: EP2402645A2] The device (1) has a partial transparent housing (2) for accommodating a light source (3). A flange part is inserted into a hollow section post (7). The housing is formed in such a manner that a cross-section of the hollow section post is completely covered and the flange part is fastened within the hollow section post. The flange part is formed with two legs by a corner piece. One of the legs receives the housing, where another leg rests in a mounted state of the device against an inner wall of the hollow section post.
