Abstract (en)

[origin: WO2010099784A1] The invention relates to an integrally bladed rotor (10) for a turbomachine, in particular for a gas turbine, comprising a main rotor body (12), in the radial edge region of which relief openings (28) extending in the axial direction are provided. A sealing element (30), which seals the relief opening (28) in the radial direction, is provided in each relief opening (28).
