Abstract (en)
A steering system for a yacht including a rudder and a user steering interface such as a wheel or tiller is described. The steering system comprising: a drive unit connected with the rudder to control the angle of the rudder relative to the yacht hull, a sensor for sensing the position or movement of the user steering interface, a controller activating the drive unit to control the angle of the rudder according to the output of the sensor, a feedback system that senses the rotation load on the rudder and applies a feedback force to the user steering interface that is a non-linear function of the rudder load.
