Abstract (en)
[origin: EP2405070A2] The steel girder has an under belt (1) utilized as a support, and a web plate (2) attached to the under belt. A ceiling slab is made of reinforced steel concrete and connected to the web plate, where the web plate is formed as a corrugated metallic sheet. The web plate is provided with a receiving device hooked with a reinforcement of the ceiling slab. The web plate is formed in trapezoidal shape and arranged symmetrical to the under belt. An upper belt (3) is connected with the web plate and divided in longitudinal direction.
