Abstract (en)

The drive (1) has a rocker (16) moving a lever (4) from an initial position into a protruding actuating position. A bearing pin (8) is guided in a longitudinal movable manner, and protrudes out from the lever. The rocker is provided with a side piece (18), and faces an end of the bearing pin, where the end of the bearing pin is turned away from the lever. A base body comprises a bearing for supporting the bearing pin. A slider (15) comprises a flange (20) that is connected with a connecting rod (2). The lever or press head (5) is held in the initial position via magnetic or spring force.

Abstract (de)

Ein Hebelgetriebe (1) zum Antrieb einer Treibstange (2) eines Treibstangenbeschlag hat eine an einem Lagerzapfen (8) eines schwenkbar gelagerten Hebels (4) angelenkte Wippe (16) zum Anheben des Hebels (4). Die Wippe (16) ist mit einem Druckknopf (5) gekoppelt. Durch Niederdrücken der Wippe (16) wird damit der Hebel (4) von einer versenkten Grundstellung in eine hervorstehende Betätigungsstellung bewegt.
