Abstract (en)

[origin: EP2405087A2] The drive (1) has a rocker (16) moving a lever (4) from an initial position into a protruding actuating position. A bearing pin (8) is guided in a longitudinal movable manner, and protrudes out from the lever. The rocker is provided with a side piece (18), and faces an end of the bearing pin, where the end of the bearing pin is turned away from the lever. A base body comprises a bearing for supporting the bearing pin. A slider (15) comprises a flange (20) that is connected with a connecting rod (2). The lever or press head (5) is held in the initial position via magnetic or spring force.
