Abstract (en)
The cooking device (A) of the invention comprises at least one heating element (2), disposed on a working plate (7), on which a cooking vessel (1) can be placed and at least one sensor (4) which detects, by measuring temperature and / or weight from the bottom surface (8) of the cooking vessel (1), whether the liquid food in the cooking vessel has boiled or not. The position of the sensor (4) in this cooking device (A) is adjustable; temperature and / or weight measurement from the bottom surfaces of cooking vessels which have different dimensions is possible.
