Abstract (en)
[origin: EP2405216A1] Functions and design of a refrigerator are improved at the same time. A refrigerator (100) includes a main body with heat-insulating property, having an opening at a front face, and a first door (111) and a second door (121) on the right and left, in which the first door (111) includes: a cutaway (170) provided at a front side of a free-end side end portion from an upper end portion to a lower end portion; a covering member (101) which is made of resin integrally covering a front face facing the cutaway (170) and a free-end side end face facing the cutaway (170), and provided from the upper end portion to the lower end portion, and the covering member (101) includes: a concave (172) recessed toward the axis of the first door (111) at the free-end side end face portion facing the cutaway (170) and at an intermediate portion in vertical direction, and is for inserting fingers when opening the first door (111).
