Abstract (en)
[origin: EP2405446A2] The construction (10) has two wall sections (11, 12) arranged together and overlapped in an overlapping region. One of the sections comprises a partial region (15), which is moved from a position closing a passage (101) into another position releasing the passage such that motion along the overlapping region takes place. The partial region comprises a narrow side lying in the former position at a corresponding region of the section with the partial region. The partial region and the sections are made of radiation protection concrete and/or barite concrete. An independent claim is also included for a radiation protection bunker comprising a wall construction and a daylight opening.
