Abstract (en)

[origin: WO2010103242A1] The invention relates to equipment (1) used in the context of transcranial stimulation implementing a magnetic stimulation antenna, comprising at least one instrument (3) for supporting the head of a person, comprising a bearing holder (4) for the head and a device (17) for attaching the bearing holder (4) to a supporting frame (18). According to the invention, the supporting instrument (3) comprises a magnetic stimulation antenna mounting structure (30) that is mounted onto the bearing holder (4) and makes it possible to move the antenna relative to the bearing holder (4), said mounting structure (30) being provided with a locking means for placing the antenna in a stationary position relative to the bearing holder (4).
