Abstract (en)

[origin: WO2010102882A2] The present invention relates to a fabric treatment composition and a method of treatment of fabric. It is an object of the present invention to provide a method and a composition for treating a fabric to impart better stain-resistance to the fabric. It has been found that a composition comprising clay, silicone oil and fatty acid when contacted with a fabric in presence of water under specific pH conditions, renders the fabric hydrophobic and thereby improves stain-resistance.
