Abstract (en)

[origin: WO2010124787A1] The invention relates to an improved method for operating a phase-controlled group antenna as well as an associated phase shifter assembly and a phase-controlled group antenna, characterized by, inter alia, the following features:; the phase shifter assembly is designed such that at least one of the following two conditions is met: RN : R1 = n + k ud/or PhN : Ph1 = n + k, where RN is the largest radius, and R1 is the smallest radius of a conductor segment (11) relative to the phase shifter assembly (7), where k is a value of 0.2 and particularly 0.25, 0.30, or preferably 0.40.
