Abstract (en)

[origin: EP2407062A1] The device (10) has a fastener (14) attachable at a fastening device (12) and a holding member (16) for receiving tools and aids. The holding member is formed from a wire i.e. computer numerical controlled (CNC) stainless steel wire. One end of the wire is introduced in the fastener and supported in an assembly state by the fastening device. The fastening device comprises an undercut groove (18) with a section bar (20) matching a rotation-preventing protrusion. A hole (24) in the fastener is engaged by a cross-bolt (26) into a slot nut (28). The holding member for receiving a cable, a cup, a lobe, a small strap, a large strap, a pen holder, a tool holder quiver of a towel, or a bottle.
