Abstract (en)

[origin: EP2407211A1] The system has an elongated slide comprising a path to allow of lanyard fixation to pass from a lateral side or another lateral side of the slide without disassembling and reassembling the lanyard fixation and without disassembling the slide from a cable. The path extends between the lateral sides of the slide, and the lanyard fixation slides in the slide. A removable blocking unit (8) is placed along the path so as to block the fixation in corresponding end of the path from the former or the latter lateral side. A guiding sleeve bends a cable at inflexion of a cable path of lifeline.
