Abstract (en)
[origin: EP2407394A1] The cartridge (1) has a reservoir (5) with a front end (7) having an exit orifice (17), and an exit channel (12) attached to the exit orifice, where diameter of the exit orifice is smaller than diameter of the reservoir. A piston (8) has a medium side (18) turned towards filling compound (3), and another piston (9) is arranged in the reservoir, where the latter piston resides at a drive side (19) of the former piston. Rinsing fluid (15) resides between the pistons, and a rinsing element (11) guides the fluid into the channel after completing a discharge process of the former piston.
